SKILLS

Implementation
Wwise, Unreal Engine, Unity, FMOD, Steam Audio, MetaSounds, Blueprints

Programming
C++, C#, Python, JUCE, Git, Perforce

Production
Reaper, Pro Tools, field recording, editing, mixing, spatial audio

EDUCATION

2023-2026
Bachelor, Game Sound Integration
Howest Digital Arts and Entertainment

Thesis: generated audio latency for real-time game sound.

LANGUAGES

Polish - native
English - fluent
German - basic

EXPERIENCE

PRESENT · BELGIUM
Technical Sound Designer - XR Labs
Design and implement audio for Unity-based VR/AR training simulations. Work includes Steam Audio spatialisation, obstruction, environmental audio and weapon-distance systems. Audio owner on selected simulations.

SELECTED PROJECTS

Shadow Frames — Sole Audio Designer · 2025
Built and mixed the Wwise/UE5 audio systems for a horror game where players locate ten anomalies by listening. C++, DataAssets, RTPCs, states and a 32-source design budget.

Transientica — Solo Developer · 2025-Present
Unity beatbox rhythm game with a custom C# feature-extraction and KNN pipeline. Earlier Python SVM prototype: 45 ms and 92%; current build benchmark pending.

Not Today, Darling! — Sole Audio Designer · 2025
Procedural MetaSounds engines and a priority-based mix for a four-player couch racer under a 32-source limit.

AudioQ — Solo Developer · 2024-2025
Open-source VST3 and standalone sampler built in C++17 and JUCE 8, with granular, filter, dynamics and glitch processing.
